

## Our passion. Innovation.

For almost two centuries we have been guided by innovation, development orientation, flexibility and universality. We create with and for our customers; we develop new alloys with them, advise them and search for new solutions for the optimisation of our processes and products. Our sustainable business growth, continuous modernisation and expansion of business capacities, wide range of products and alloys represent the guarantee that, with us, you will get a reliable business partner.

Rolling is our core production group. Technologically perfected rolled semi-finished products are produced on three sites in three different countries and our production has significantly increased over the past few years and continues to grow further. Growing sales provide us with certainty and flexibility and ensure excellent distribution paths. The state-of-the-art know-how of our development experts and the most advanced equipment together create foils and thin strips.

CORROSION-RESISTANCE

DEADFOLD PERFORMANCE

NON-TOXICITY AND HYGIENE

LIGHT AND AIR BARRIER

The chemical compositions of alloys define their specific properties, but the following properties are common to all alloys:

- Aluminium does not react with the majority of organic substances.
- Aluminium is resistant to chemical reactions. Its resistance depends on individual compounds or its components.
- Aluminium has good corrosion resistance.
  Foils can be pre-treated or laminated to increase their resistance in salt media.
- Aluminium does not react with alimentary products.
- Aluminium is opaque.

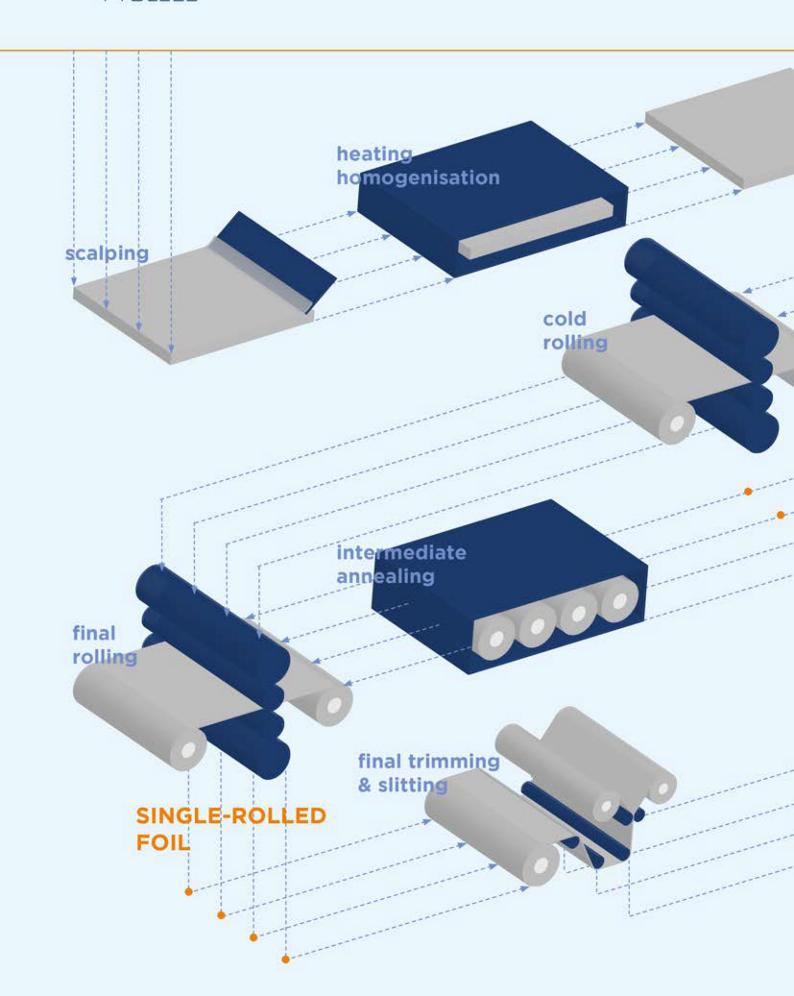

Applications of aluminium foils and thin gauge strips with a thickness below 0.50 mm:

- Aluminium foil for food and beverage packaging
- Aluminium foil for pharmaceutical use
- Foil for technical use
- Container foil
- Household foil
- Finstock for heat exchangers
- Aluminium strips and foil for tubes
- Aluminium strips for profiling
